

LoginAT

Author	: Nihesh Anderson K
Project	: LoginAT
Software Requirements	: Linux Mint 18 (OS), Python3.5.2, Firefox
APIs/Frameworks	: Selenium webdriver, pyautogui, tkinter

ABSTRACT

LoginAT is a password manager. It uses the concept of hashing and encryption to store passwords. To add to the security, LoginAT uses OS' methods to hide sensitive information. Unlike any normal password manager, LoginAT allows its users to login into a range of applications with just one click. Fed up of logging into the same sites again and again manually, everyday? LoginAT is the perfect application for you!

FEATURES

- Store passwords
- Restore passwords upon authentication
- Auto-login into multiple sites on a single click
- High security – Reliable

GETTING STARTED

- Extract the contents of the zip file.
- Set executable rights to “setup” file
- execute “setup” file.

LoginAT will install the dependencies automatically for you. Once done, the application executable will be created in the desktop. Launch the application and explore!
